

Microsoft Presents InfraScience the Southeast District Partner Award for Competency and Teamwork

Microsoft Award Recognizes InfraScience as a Strategic Partner

Alpharetta, GA - (July 31, 2007) - InfraScience announced today that they have been recognized by Microsoft as the Southeast District Partner Award winner for Competency and Teamwork. The Competencies and Best Practices award recognizes exceptional expertise or competency by a partner in a specific industry, vertical, solution or segment. It also celebrates the partner's commitment to their specific area of specialization. And, the Teamwork award recognizes situations where multiple partners work together to develop solutions that help customers utilize technology to realize their full potential.

InfraScience's primary objective is to help clients maximize their IT Infrastructure investments. As a Microsoft Managed Partner and Gold Certified Partner, InfraScience is focused on Microsoft Active Directory, Identity Management, Messaging and Collaboration specializations. Recommending standardization on Microsoft solutions reduces administrative costs, licensing costs and achieves consolidation goals while improving service levels and functionality. InfraScience offers targeted services to help clients understand the savings of transitioning away from Novell or Lotus products to Microsoft solutions. InfraScience can ease the fear and pain associated with major transitions by bundling expertise with appropriate third party tools. This reduces the effort required and minimizes user disruption during infrastructure migration projects.

"We are honored to accept these partner awards," Jeff Meyer, Principal Partner, InfraScience said. "This recognition verifies our expertise of Microsoft technologies and acknowledges our commitment to providing a comprehensive solution that meets the client's business needs."

To earn the Teamwork award, InfraScience partnered with Microsoft, SoftMart and ThoughtBridge to help the University Health Care Systems in Augusta, GA. Primary objective for the client was to reduce overall software costs; improve license management; and to standardize servers and desktops on current Microsoft technologies. InfraScience provided ROI calculations and real world experiences to discuss potential savings for a transition from Lotus Domino to the Microsoft Collaboration Suite. When all the consulting projects are completed, University Health will recognize significant savings on costs of software, reduced administration and better access to critical operational information.

About InfraScience:

Based in Alpharetta, Georgia, InfraScience, LLC provides consulting services for mid-market and Fortune 1000 clients desiring expert guidance on technology infrastructure initiatives. The firm, a Microsoft Gold Certified Partner, helps organizations maximize their return on infrastructure investments.
